Period fo	The MAILING DATE of this communic or Reply	ation appears	s on the cover sheet with the c	orrespondence address				
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).								
Status								
1) 又	Responsive to communication(s) filed	on 23 Nove	mber 2005.					
· <u> </u>	This action is <b>FINAL</b> . 2b)⊠ This action is non-final.							
	Since this application is in condition for allowance except for formal matters, prosecution as to the merits is

Art Unit: 3621

1. The following is a quotation of 35 U.S.C. 3 103 which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) or (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

3. Claims 199-212 are rejected under 35 U.S.C. 3 103 as being unpatentable over Ballard (6032137) or Campbell et al (5373550) in view of Owens et al (4264808).

Regarding claim 199, Ballard (See abstract, Figs. 1-2, 4, 6, 10, Col. 22, lines 5-50, claims 1-43) or Campbell et al (See abstract, Figs. 1-2, Cols. 3-6, claims 1-16) disclose system for capturing check images with servers and digital signature for the check images and validation for service substantially as claimed. The differences between the above and the claimed invention is the use of specific image processing criteria. It is noted that it is believed that check images are functionally equivalent to the claimed limitations and that the claim as drawn is readable on any the well-established bank

Art Unit: 3621

clearing transaction methods and standards established by American Bankers Association (e.g. ANSI/ABA x9.46-1995, version 0.13). Owens et al (See abstract, Figs. 1, 9) show electronic image processing for check clearing. It would have been obvious to the person having ordinary skill in this art to provide a similar arrangement for Ballard or Campbell et al because the check image transmission are conventional functional equivalents with respect to the claim limitations and their employment is a necessary component of validation and use in a bank clearing system. Regarding the server limitations of claim 200, Ballard (See abstract, Figs. 1-2, 4, 6, 10, Col. 22, lines 5-50, claims 1-43) disclose capturing check images with servers and digital signature for the check images and validation for service that is a functional equivalent of the claim limitations. Regarding the timing limitations of claim 201, Ballard (See abstract, Figs. 1-2, 4, 6, 10, Col. 22, lines 5-50, claims 1-43) disclose capturing check images with servers and digital signature for the check images and validation for service that is a functional equivalent of the claim limitations. Regarding the MICR limitations of claim 202, Ballard (See abstract, Figs. 1-2, 4, 6, 10, Col. 22, lines 5-50, claims 1-43) disclose capturing check images with servers and digital signature for the check images and validation for service , otherwise resort can be had to Hayosh (See Figs. 2, 9 and 10) show MICR digitally signed checks which is a functional equivalent of the claim limitations. Regarding the timing

Art Unit: 3621

limitations of claim 203, Ballard (See abstract, Figs. 1-2, 4, 6, 10, Col. 22, lines 5-50, claims 1-43) disclose capturing check images with servers and digital signature for the check images and validation for service which is a functional equivalent of the claim limitations. Regarding the quality limitations of claim 204, standard bank check clearing criteria established by Federal Reserve regulation are the functional equivalent of the claim limitations. Regarding the quality limitations of claim 205, standard bank check clearing criteria established by Federal Reserve regulation are the functional equivalent of the claim limitations. Regarding the access limitations of claim 206, Ballard (See abstract, Figs. 1-2, 4, 6, 10, Col. 22, lines 5-50, claims 1-43) disclose capturing check images with servers and digital signature for the check images and validation for service that is a functional equivalent of the claim limitations. Regarding the access limitations of claim 207, standard bank check clearing criteria established by Federal Reserve regulation are the functional equivalent of the claim limitations. Regarding the transmission limitations of claims 208-210, Ballard (See abstract, Figs. 1-2, 4, 6, 10, Col. 22, lines 5-50, claims 1-43) disclose capturing check images with servers and digital signature for the check images and validation for service that is a functional equivalent of the claim limitations. Regarding the capture limitations of claim 211, Ballard (See abstract, Figs. 1-2, 4, 6, 10, Col. 22, lines 5-50, claims 1-43) disclose capturing

Art Unit: 3621

check images with servers and digital signature for the check images and validation for service that is a functional equivalent of the claim limitations. Regarding the capture limitations of claim 212, Ballard (See abstract, Figs. 1-2, 4, 6, 10, Col. 22, lines 5-50, claims 1-43) disclose capturing check images with servers and digital signature for the check images and validation for service that is a functional equivalent of the claim limitations.

Examiner's Note: Although Examiner has cited particular columns, line numbers and figures in the references as applied to the claims above for the convenience of the applicant(s), the specified citations are merely representative of the teaching of the prior art that are applied to specific limitations within the individual claim and other passages and figures may apply as well. It is respectfully requested that the applicant(s), in preparing the response, fully consider the items of evidence in their entirety as potentially teaching all or part of the claimed invention, as well as the context of the passage as taught by the prior art or disclosed by the Examiner.

Applicants arguments filed 11/23/2005 are moot due the new grounds of rejection.

Any inquiry concerning this communication should be directed to Salvatore Cangialosi at telephone number (571) 272-6927. The examiner can normally be reached 6:30 Am to 5:00 PM, Tuesday through Friday. If attempts to reach the examiner by telephone

Art Unit: 3621

are unsuccessful, the examiner's supervisor, James Trammell, can be reached at (571) 272-6712.

## Any response to this action should be mailed to:

Mail Stop Amendment Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

## or faxed to (571)273-8300

Hand delivered responses should be brought to

United States Patent and Trademark Office Customer Service Window Randolph Building 401 Dulany Street Alexandria, VA 22314

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on

Art Unit: 3621

access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
